

EXECUTIVE SUMMARY

This report presents the key findings from the analysis of the Superstore Sales dataset. The objective of this project was to clean the data, analyze sales performance, generate key business insights, and build an interactive dashboard for better decision-making.

The analysis covers sales, profit, quantity, customer behavior, and regional performance. The dashboard provides a high-level overview of business performance using key metrics and visualizations.

The data pipeline has been automated using Python to ensure that the process of data cleaning, KPI calculation, and report generation can be executed seamlessly and consistently.

KEY PERFORMANCE INDICATORS (KPIs)

KPI	VALUE
 Total Sales	154,044.60
 Total Profit	16,774.68
 Total Quantity	1,075
 Total Orders	500
 Average Discount	0.16

DASHBOARD OVERVIEW

Task 3 Dashboard Mockup (Power BI-ready layout)

TOP 5 INSIGHTS

- Technology and Office Supplies are the top contributors to total sales, together accounting for more than 60% of total sales.
- The West and Central regions have the highest sales contribution, each contributing around 26% of total sales.
- Profit is highest in the Office Supplies category, followed by Technology and Furniture.
- Sales show a strong upward trend from July to October, with October being the highest performing month.
- A small number of customers contribute significantly to overall sales, highlighting the importance of customer retention strategies.

3 BUSINESS RECOMMENDATIONS

Focus on High-Performing Categories

Increase marketing and inventory for Technology and Office Supplies as they drive the majority of sales and profit.

Strengthen Presence in High-Performing Regions

Invest more in the West and Central regions and identify growth opportunities in the South and East regions.

Enhance Customer Retention Strategies

Focus on top customers and implement loyalty programs to increase repeat purchases and lifetime value.

CONCLUSION

The analysis of the Superstore Sales data provides valuable insights into business performance. The automation pipeline ensures accuracy, saves time, and allows for regular updates. The insights and recommendations in this report can help drive strategic decisions and improve overall business growth and profitability.
